6"	4,300 (B)	132,250	C	370 (E)	245,000	C

NOTES:

- A. Where ACSA Engineering Staff determines that no new physical connection or upgrade is required the hookup fee may be waived. If a replacement meter is needed, the hookup fee shall be the actual meter cost plus \$250.
 - When a developer completes all water & sewer connections within a residential subdivision (5/8" connections only and developer supplies all labor and materials, excluding meter and installation) in accordance with ACSA Design and Construction Standards, the following hookup fees shall apply: \$370 for water, \$250 for sewer.
 - For commercial and multifamily developments where the developer completes all water and sewer connections to ACSA Design and Construction Standards (excluding meter and installation) in conjunction with new water/sewer main installation the hookup fee shall be the actual meter cost plus \$250 for water and \$250 for all sewer sizes.
 - The hookup fee covers the direct cost of normal installation of water and/or sewer service hookup at a customer's property line. If unusual field conditions exist at the customer's property that increase the cost by more than 50% of the published hookup, the ACSA will require the property owner to pay the additional cost. Should these conditions exist the ACSA will provide the owner with a written cost estimate and establish a contract agreement prior to proceeding with the installation of the service. Upgrading a service shall be done on a time and material basis.
- B. Hookup fee in table above applies when the owner/developer provides the vault, without a meter, in accordance with ACSA Design and Construction Standards. The ACSA will supply the meter once all fees have been paid. When the owner/developer supplies the vault, with the meter, in accordance with ACSA Design and Construction Standards, the hook-up fee shall be \$370. Use of the connection will be authorized only after payment of all fees and inspection by the ACSA.
- C. Extensions of service are constructed by special agreement, which shall specify additional costs.
- D. The owner/developer shall install the connection at their expense in accordance with ACSA Design and Construction Standards or the hookup fee will be done on a time and material basis if installation is by the ACSA.
- E. Upgrading to a larger meter requires a payment of the difference between the current availability fees.
- F. Availability fees for multi-family, hotel, trailer parks, or other master-metered residential complexes shall be charged the higher of a fee based upon meter size or the calculation of the number of units multiplied by the following factors, where 1.0 ERC is equal to the 5/8" meter rate: Multi-family and Hotels: 1 unit = 0.36 ERC, Mobile home park: 1 mobile home = 0.56 ERC.
- G. For meters larger than 6" availability and hookup fees will be determined on a case by case basis.
